

Virtual System Prototyping

Modeling & Simulation with Simplorer

Fluids

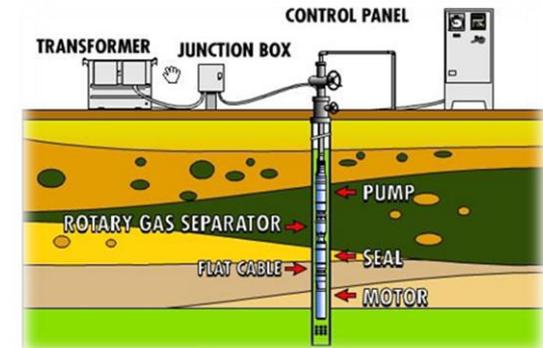

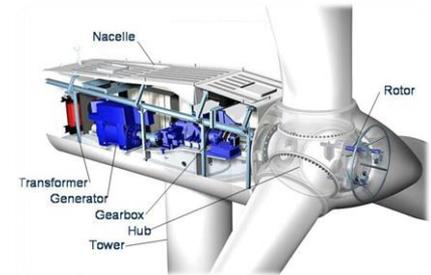

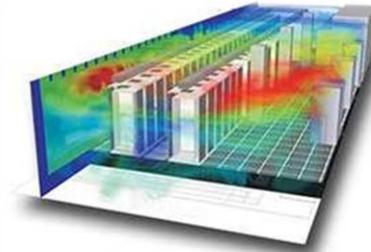

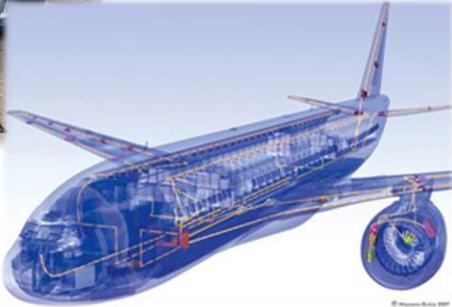

Structures

Electronics

Systems

Electrified Systems – They're Everywhere

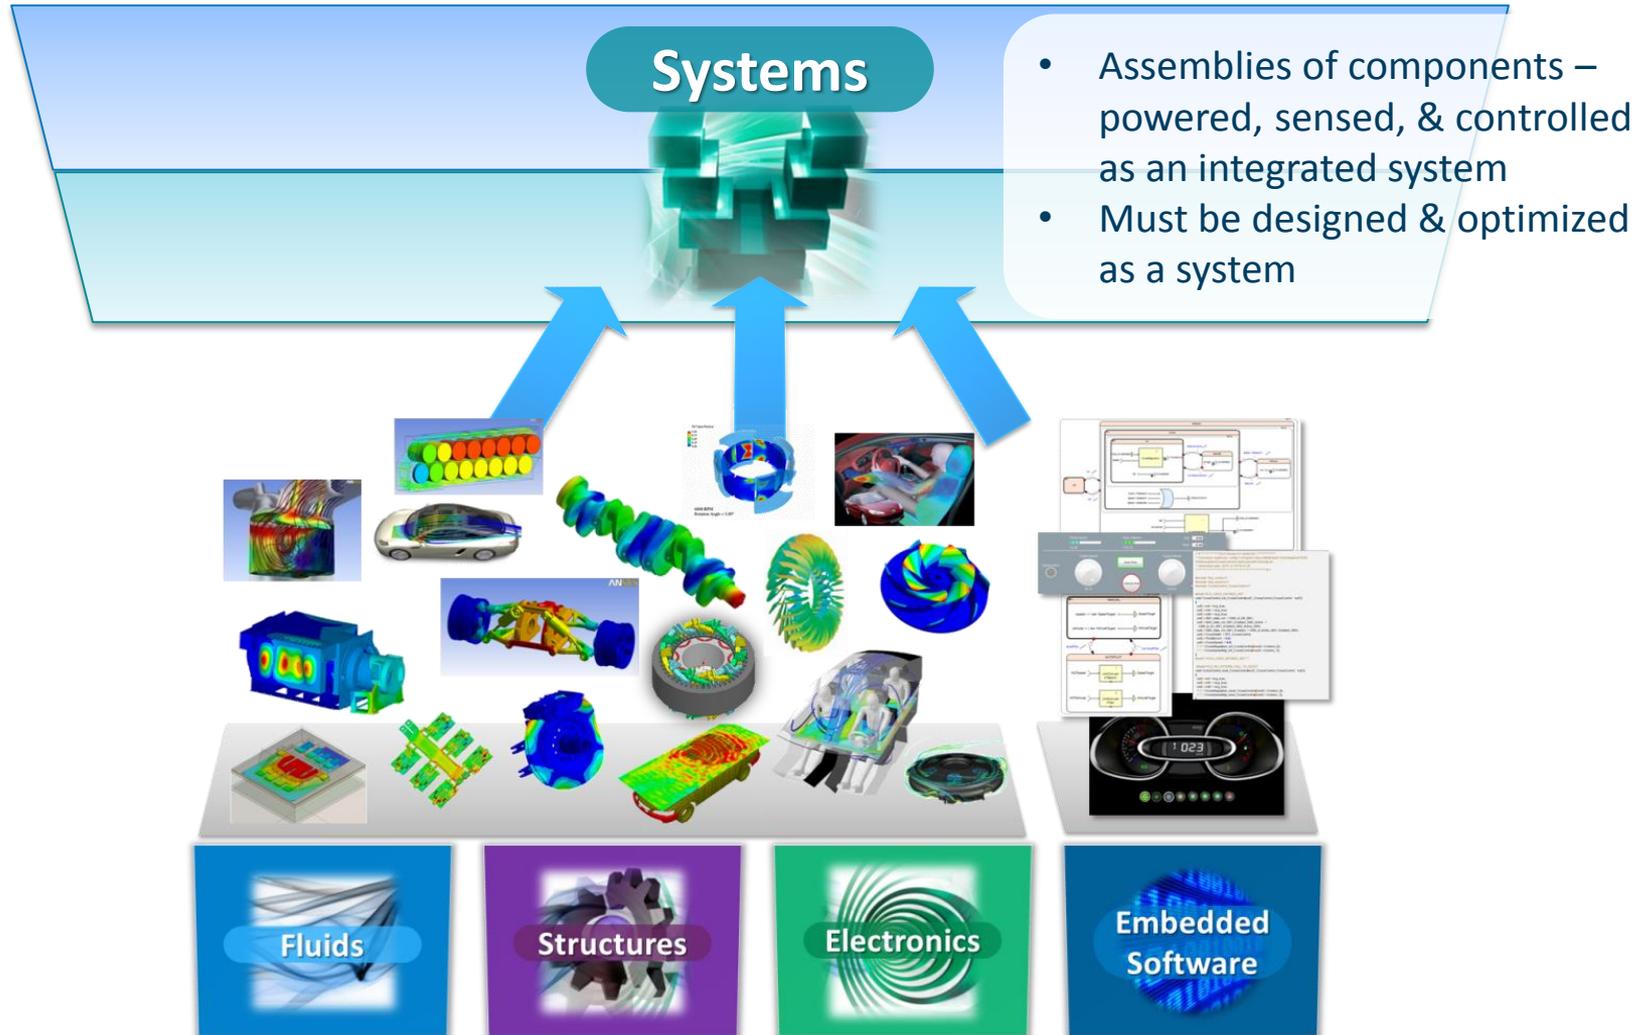

It's an opportunity to innovate...

- Powering, Actuating, Sensing, Controlling products in new ways

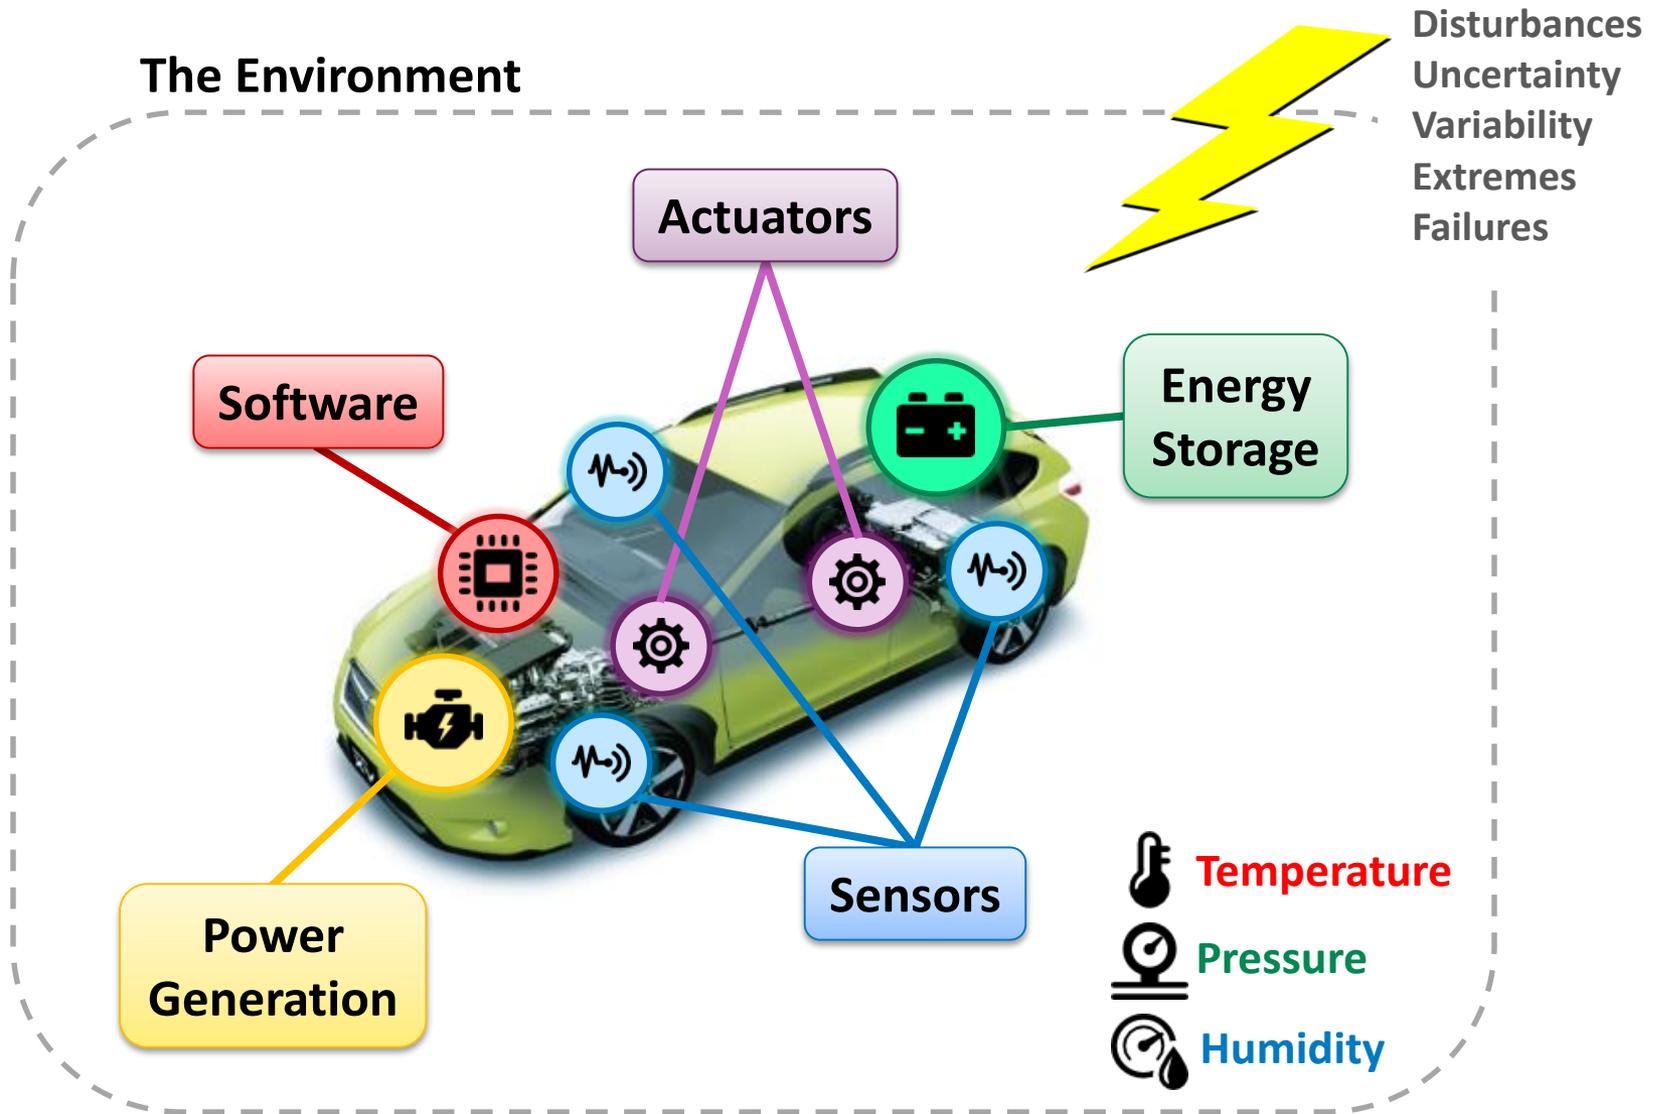

...with a lot at stake

- Better performance
- Higher efficiency
- Lower cost
- Higher reliability

The Next Level: Systems

What is a System?

Why is System Simulation Useful?

At the start of the design process

- Early Architectural Tradeoffs
- “Simulation-in-the-loop” for predictive studies
- Pre-Sales / Collaboration tool

During the design process

- Embedded Control Algorithm Design / Tuning
- System Verification / Validation
- Virtual Integration

At the end of the design process

- System Performance Optimization
- Robust Design

After the design process has been completed

- Predictive Maintenance
- Adaptive Controls Tuning

A System Example

Electric Vehicle Drivetrain

Fluids

Structures

Electronics

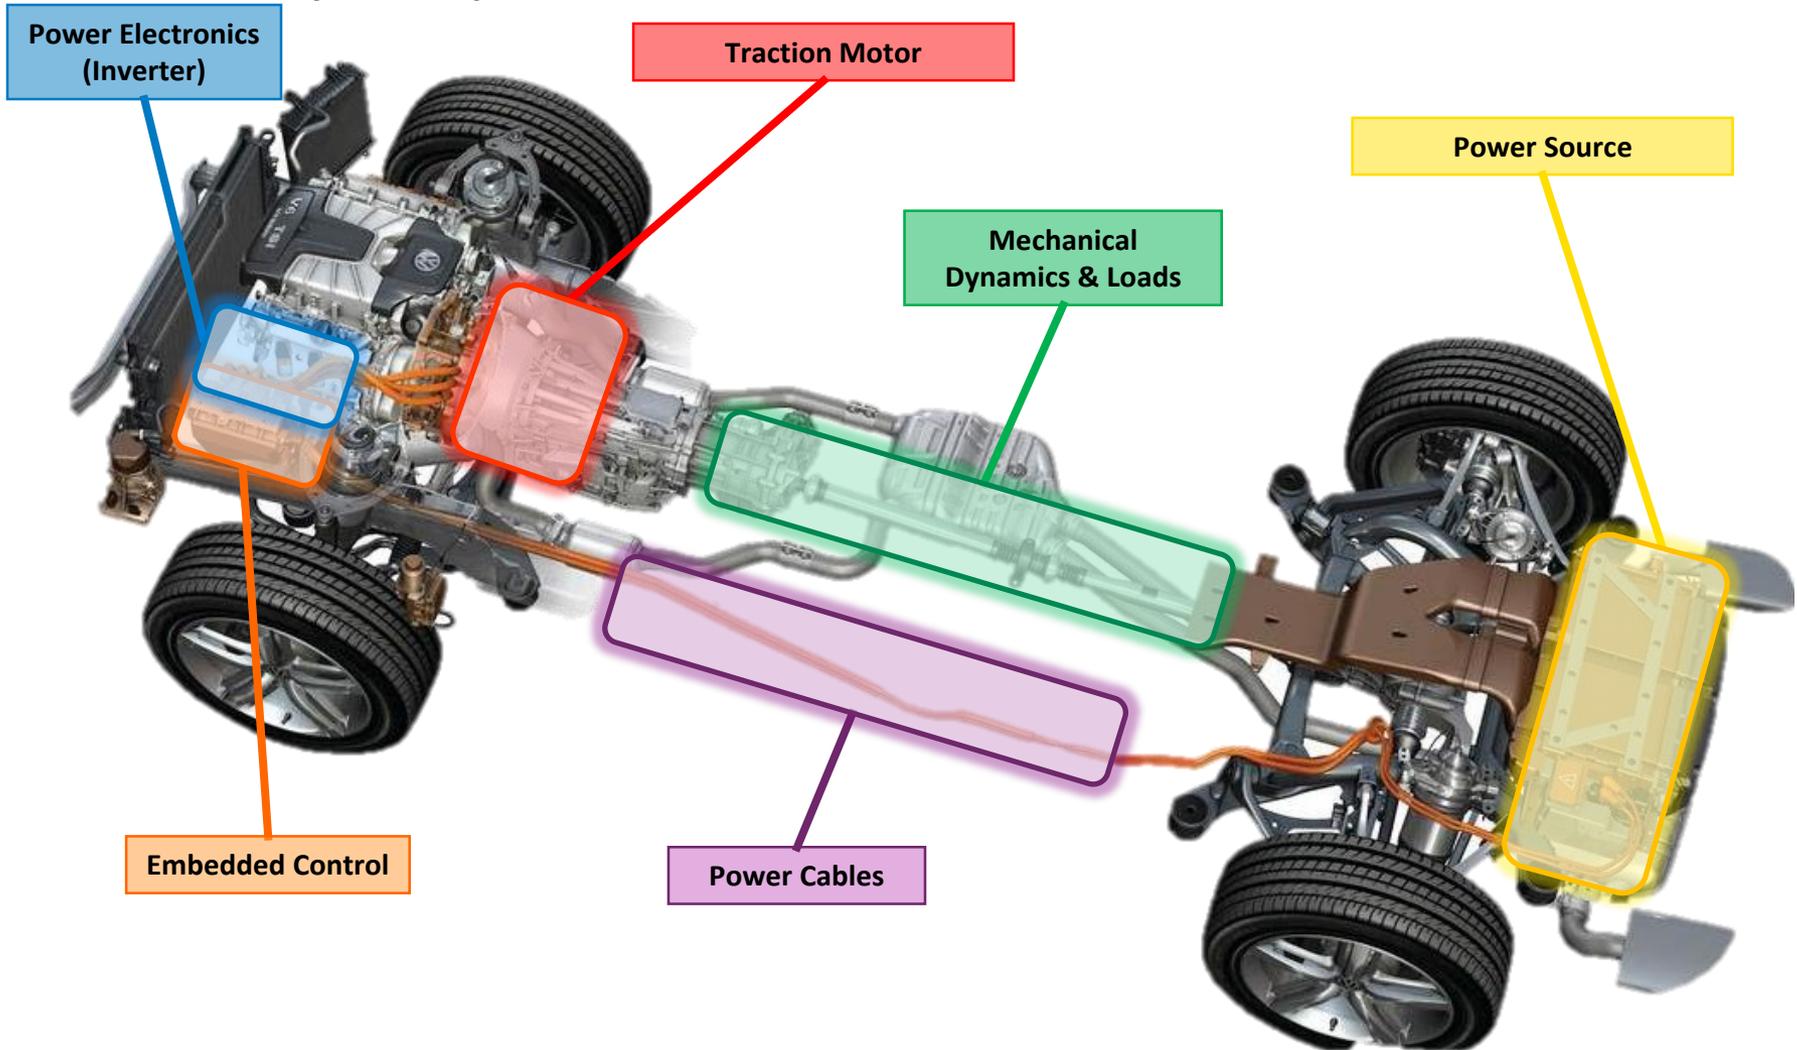

Systems

Key System-Level Considerations

- System Cost
- Reliability / Warranty
- Package Size
- Energy Efficiency
- Safety Integrity
- Drive Quality

Electric Vehicle Drivetrain

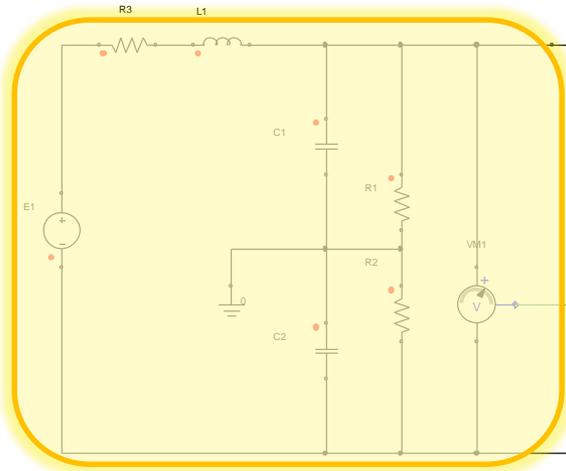

Key Components

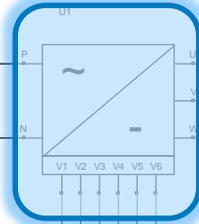

Electric Vehicle Drivetrain

As a System Model

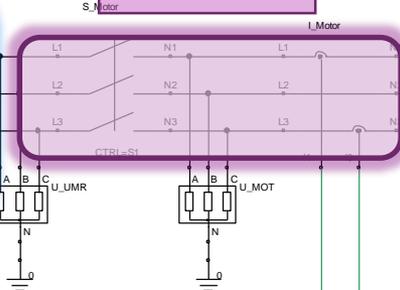

Power Source

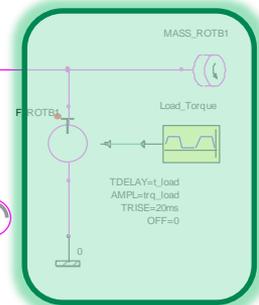

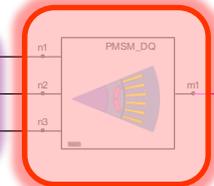

Power Electronics: Inverter

Power Cables

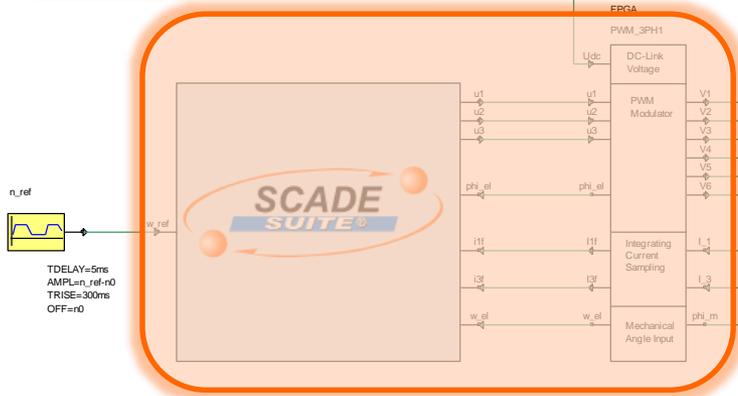

Traction Motor (PMSM)

Mechanical Dynamics & Loads

Embedded Control

System Modeling

Detail & Fidelity

A visualization of fluid flow simulation, showing blue, wavy, semi-transparent surfaces representing the movement of a fluid over a curved path.

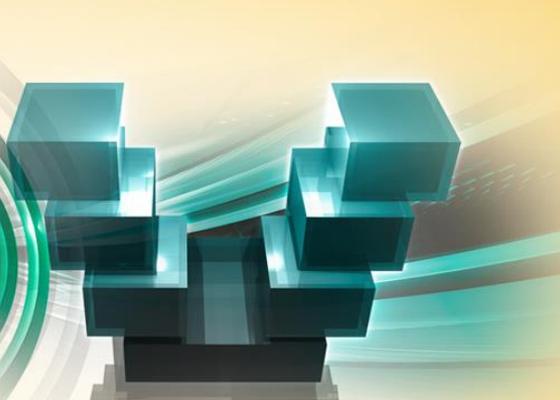

Fluids

A 3D model of a purple gear with a glowing white and purple center, representing structural analysis of a mechanical component.

Structures

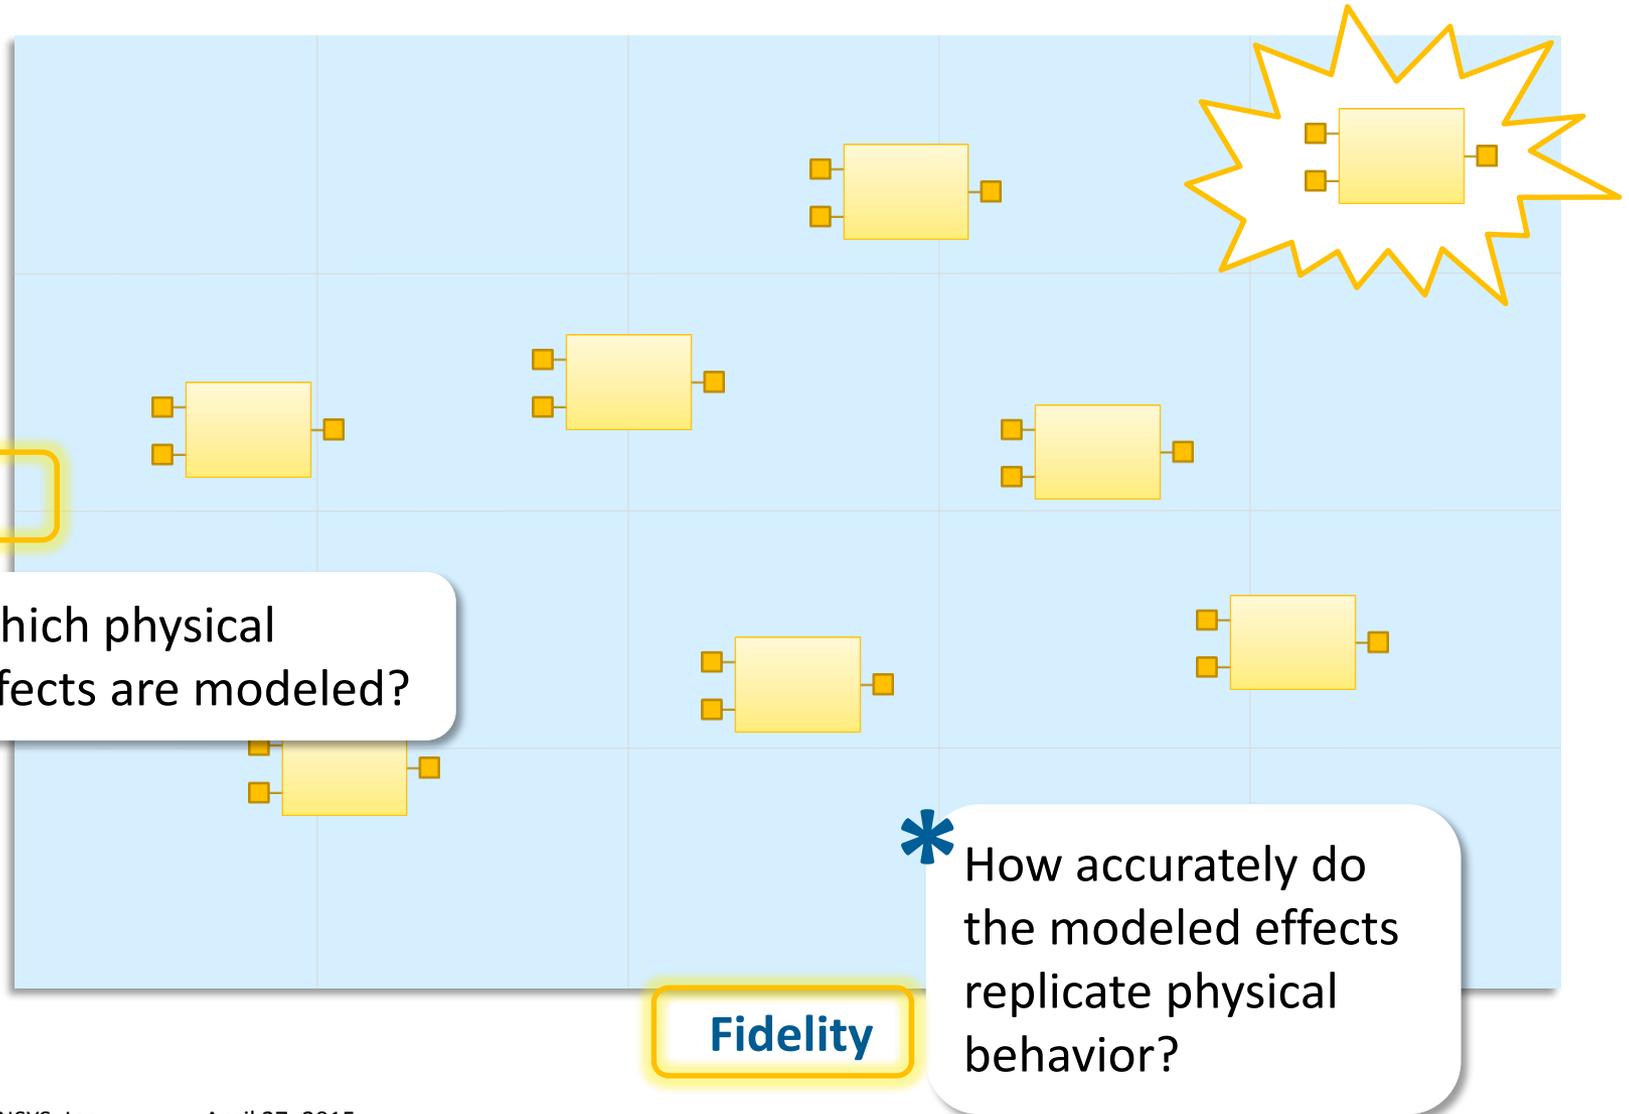

A series of concentric green and white circles, representing electromagnetic field simulation or thermal analysis in electronics.

Electronics

A 3D assembly of teal and black rectangular blocks, representing system-level modeling and integration of various components.

Simplorer for Systems

Modeling & Analysis

A visualization of fluid flow simulation, showing blue, wavy, semi-transparent surfaces representing the movement of a fluid.

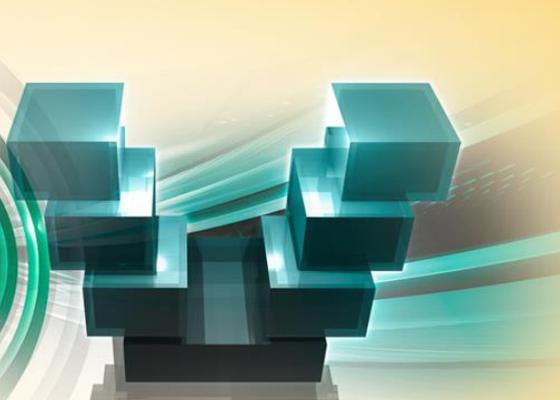

Fluids

A 3D model of a purple gear with a glowing white and purple center, representing structural analysis.

Structures

A visualization of concentric green and white circles, representing electromagnetic or thermal analysis in electronics.

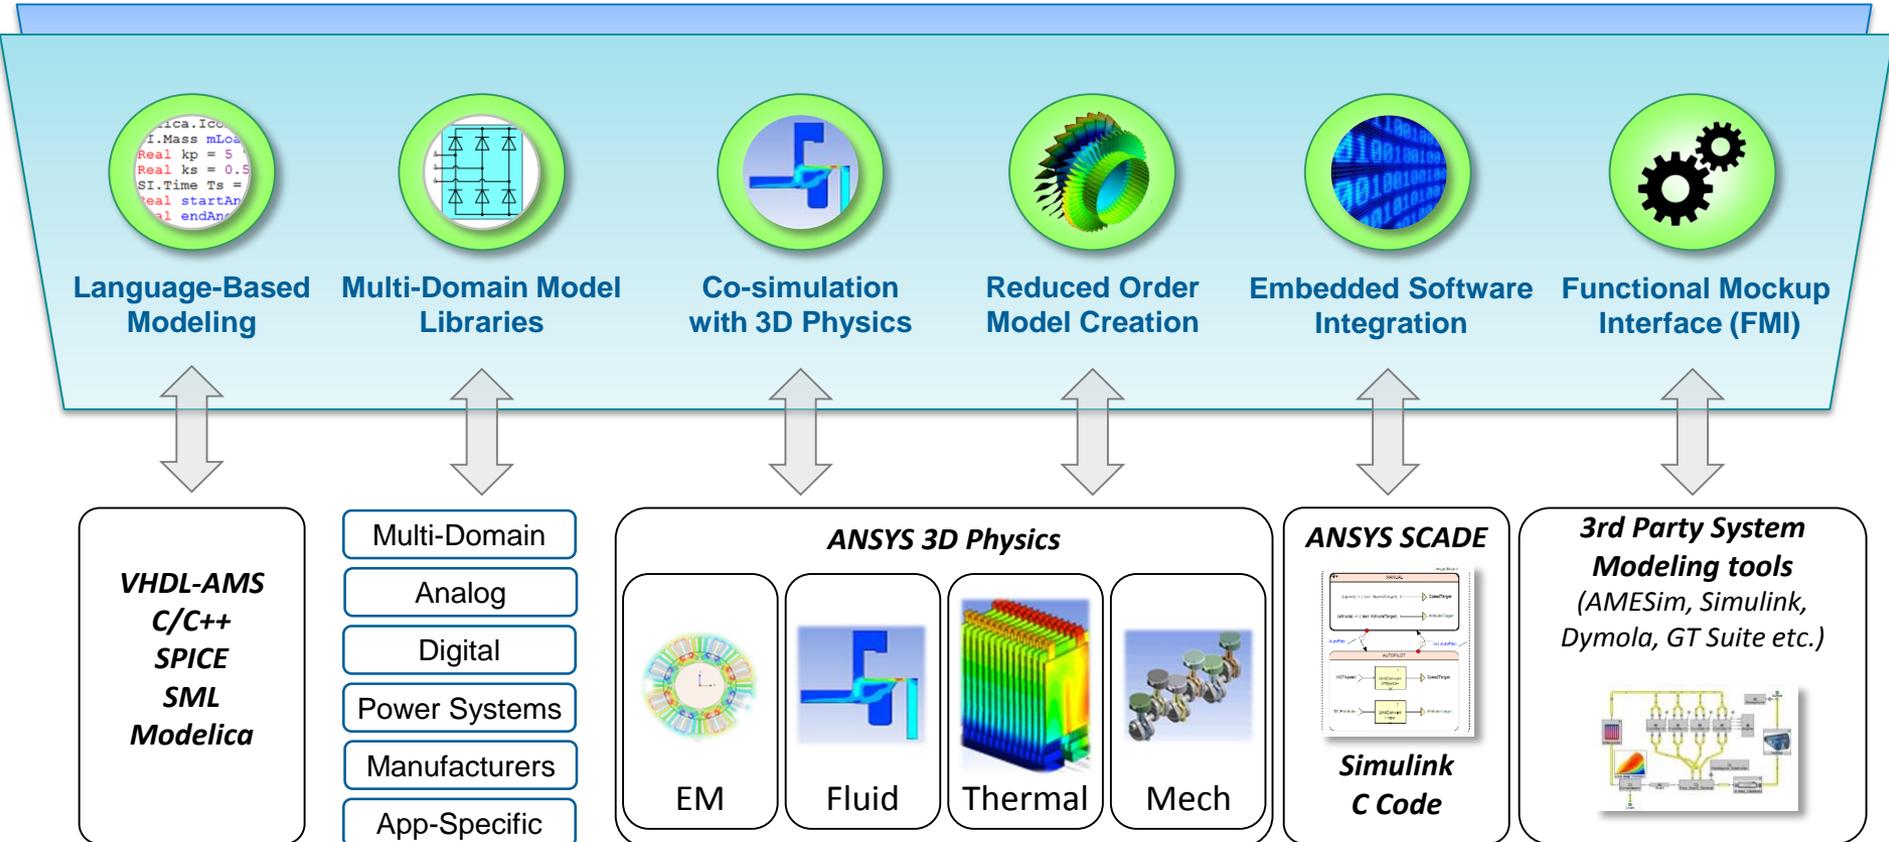

Electronics

A 3D model of several stacked, glowing teal cubes, representing system-level analysis and integration.

Systems

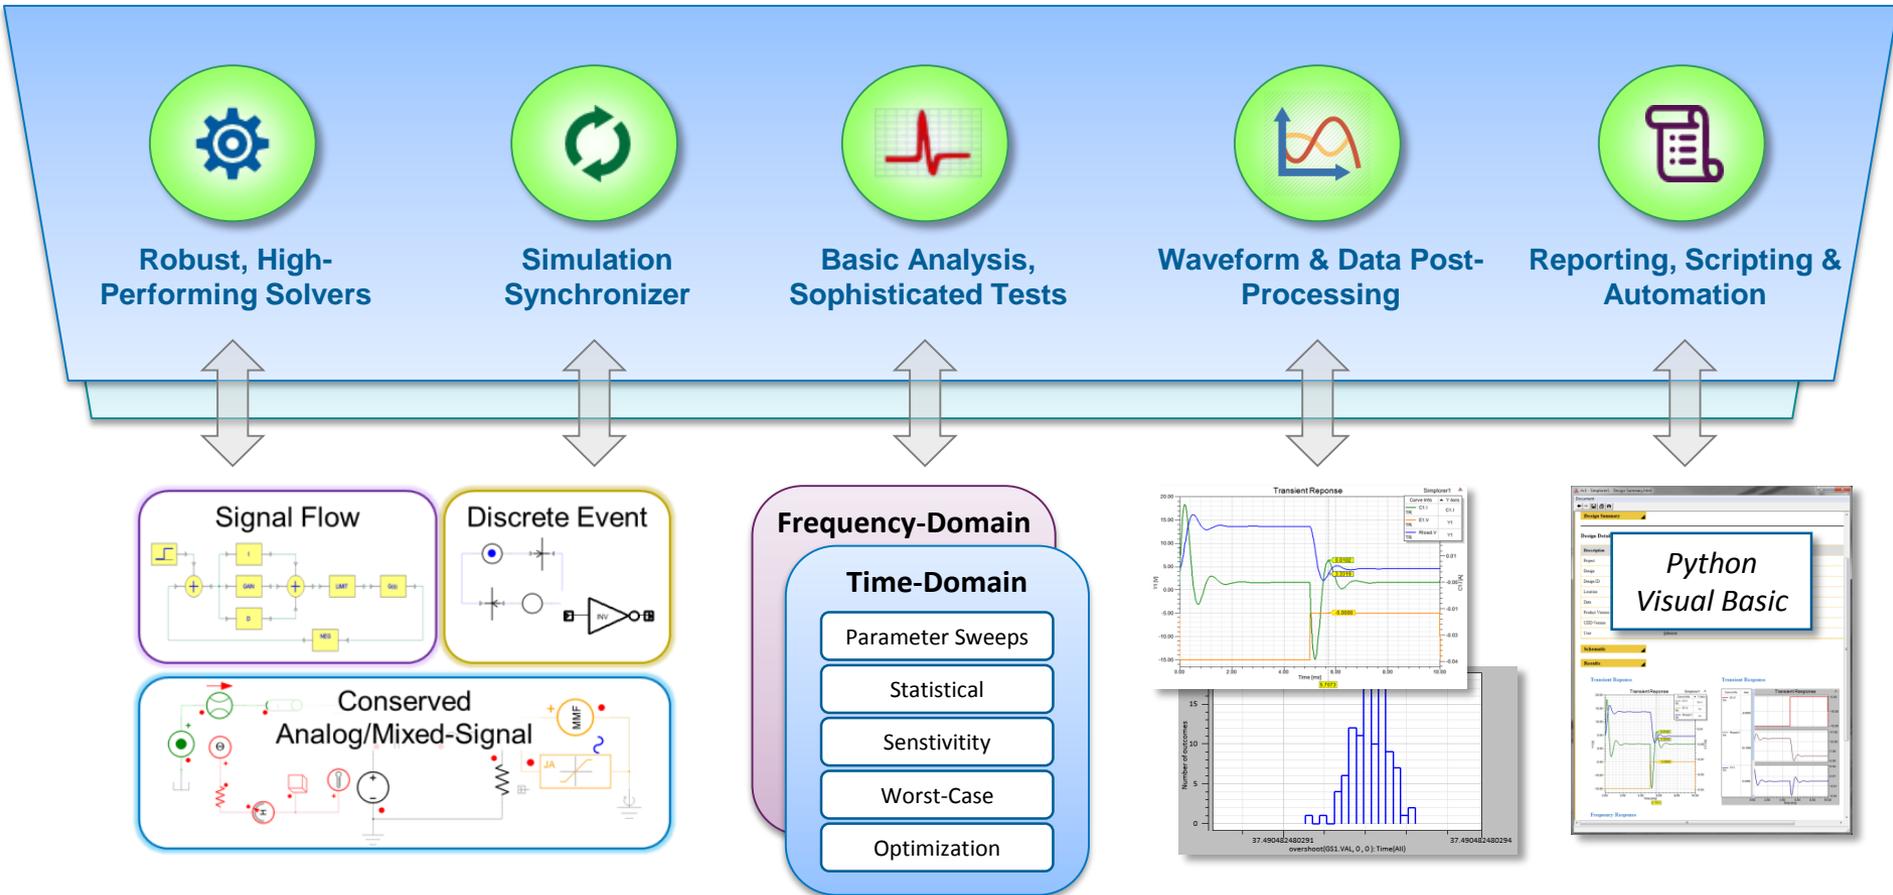

Modeling the System

Powerful Capabilities for Assembly and Reuse

Analyzing the System

Robust Support for Simulation-Based Testing

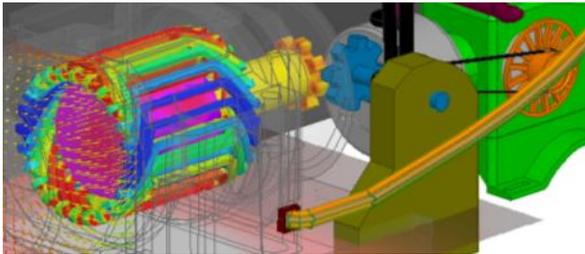

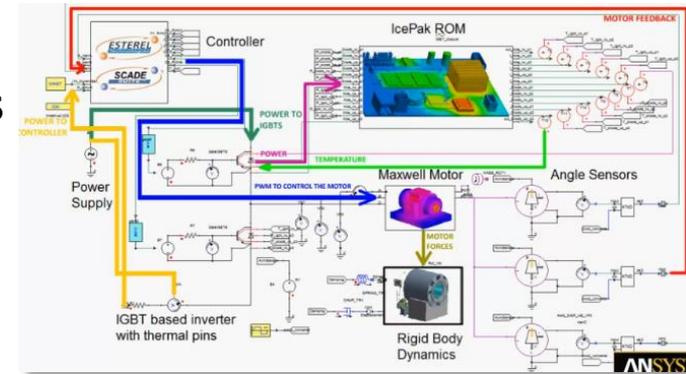

A Comprehensive platform for modeling, simulating, and analyzing virtual system prototypes

Spans electrical, electronics, mechanics, thermo-fluids, and embedded software systems

Open Integration of existing tools

Full FMI compliance enables embracing and extending existing tools and libraries (Modelica and other FMI-compliant tools)

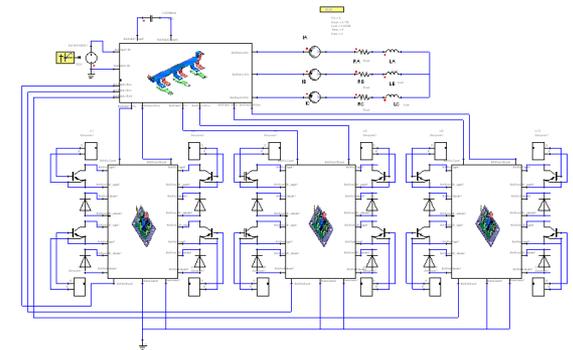

3-D Precision When You Need It

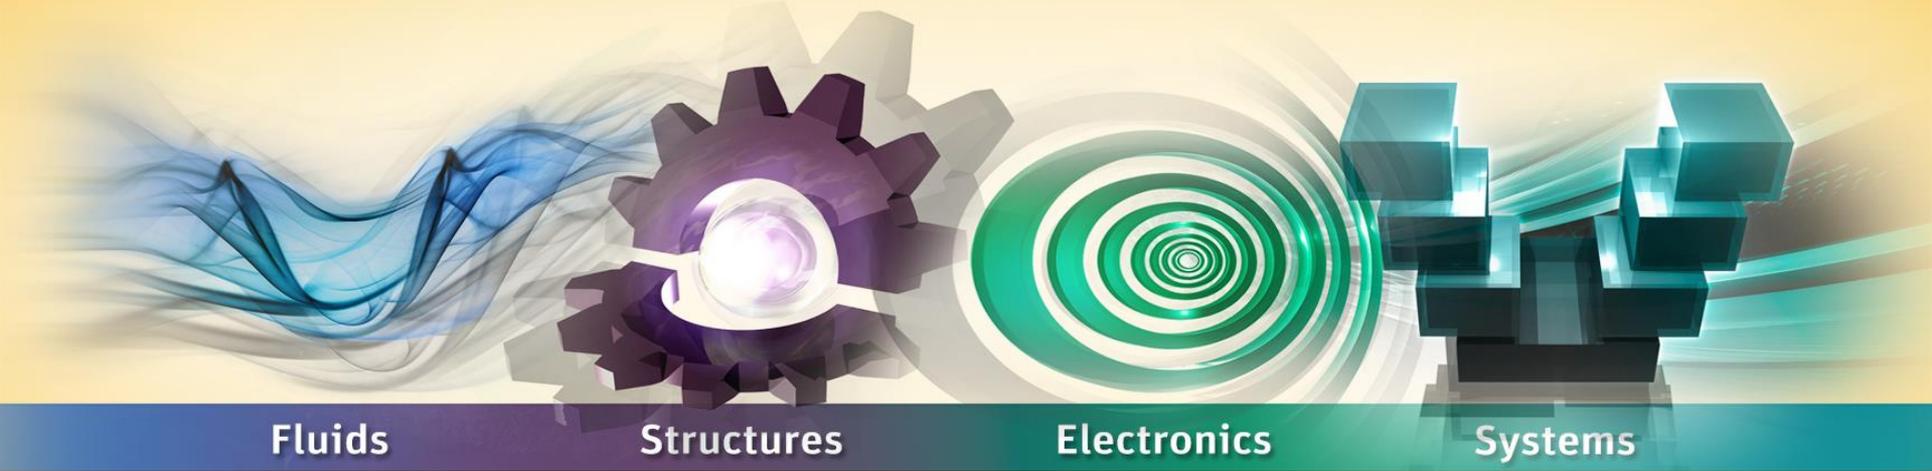

Cosimulation with 3-D solvers and reduced-order modeling (ROM) captures complex multi-physics interactions when precise system verification is required

Leader in simulation for power electronics and electrical systems

Rich modeling libraries and design automation designed especially for high-performance power electronics and electromechanical simulation

Thank You!
